Address
Block 25, LSDPC, Amuwo, Lagos, Nigeria.

SKILLS

- Communication (Local communities and international)
- Problem Solving
- Time Management
- Analytical (Data/Business)
- Critical Thinking

About me:

A detail-oriented and results-driven Full-Stack Developer with strong analytical, problem-solving, and technical skills. Experienced in building responsive web applications, developing robust backend systems, designing RESTful APIs, and managing databases. Proficient in JavaScript, React, Node.js, Express, and MongoDB, with a commitment to writing clean, maintainable code and delivering efficient solutions.

EDUCATION/CERTIFICATES

2026: Backend Development - Certificate of Completion.

2026: Soft Skills for Career Success – Certificate of Achievement from The African Talent Company.

2024: Frontend Development - Certificate of Completion.

2022: National Diploma Certificate, Marine Engineering from Delta State School of Marine Technology.

TECHNICAL SKILLS

Frontend Development
HTML5, CSS3, JavaScript, TypeScript, React, Bootstrap.

Backend Development
Node.js, Express.js, REST APIs, Authentication & Authorization, Server-side logic.

Databases
MongoDB, MySQL, PostgreSQL, Firebase

Tools & Platforms
Git, GitHub, Postman, Docker, Visual Studio Code

APPLICATIONS USED

- Github
- Postgre
- Node.js
- VSC
- React
- Bootstrap
- Express.js
- MongoDB
- PostMan

Work Experience 1:

Backend Engineer – Property Plus (E-commerce & Enterprise Systems)

January 2025 till date.

Worked across e-commerce, logistics, and enterprise systems, focusing on system integrity, back-end logic validation, data analysis, API workflows, security controls, and platform reliability across multiple digital products.

Fintech & Payment Systems Development Support

- Reviewed and validated payment workflows across mobile applications and online platforms, ensuring correct transaction logic, fee calculations, and system integrity.
- Performed back-end data validation for revenue systems including Property Pay integration and third-party payment settlements using large-scale data analysis.
- Audited and analyzed API-driven financial transactions to ensure completeness, accuracy, and system consistency across multiple regions.
- Investigated discrepancies in transaction flows, supporting improvements in system reliability and financial data correctness.

Security, Access Control & Infrastructure Systems

- Evaluated system security controls across applications, focusing on authentication, authorization, and data protection mechanisms.
- Reviewed access management for internal platforms, ensuring proper role-based permissions and secure system usage.
- Assessed physical and digital infrastructure systems including server environments, monitoring tools, and operational security configurations.
- Recommended improvements for system resilience, data protection, and secure deployment practices.

Backend Data Systems & Financial Reporting Logic

- Analyzed large-scale datasets across multiple systems to validate data consistency, detect anomalies, and ensure accurate system outputs.

- Worked with ERP and enterprise platforms to validate back-end data integrity and resolve inconsistencies in system records.
- Performed trend and ratio analysis on financial systems to detect performance issues and back-end data mismatches.
- Supported development of structured reporting logic for multi-country data systems.

E-commerce & Logistics Systems Analysis

- Evaluated back-end workflows for inventory management, logistics tracking, and fleet operations across distributed systems.
- Reviewed API and system integration with third-party logistics providers, ensuring smooth data flow between platforms.
- Assessed system logic for order processing, delivery tracking, and operational dashboards across multiple hubs.
- Validated vendor and partner on boarding systems for compliance with platform rules and data integrity standards.

System Testing, Compliance & Control Engineering (SOX-aligned)

- Performed structured testing of internal system controls using tools like Workiva to validate system reliability and compliance logic.
- Evaluated back-end control mechanisms aligned with COSO framework principles for system governance and reliability.
- Monitored system compliance with evolving financial reporting and software control standards.
- Supported remediation of system vulnerabilities and logic inconsistencies.

Enterprise Risk Systems & Data Modeling

- Contributed to the design and automation of risk tracking systems, including risk registers and heat maps for system-level decision-making.
- Assisted in building structured frameworks for identifying, ranking, and monitoring system risks across digital platforms.
- Supported cross-functional teams in translating operational risks into structured data models for enterprise systems

Work Experience 2:

Full Stack Development (Media Systems, Data & Risk Advisory) – Cabby Sports

March 2023 – till present

Supported system analysis, data integrity, and back-end process validation across enterprise and media-related platforms, focusing on reliable information flow, structured reporting systems, and operational efficiency.

- Reviewed back-end systems and workflows to ensure accuracy and consistency of data across business and reporting platforms.
- Performed quality assurance checks on internal systems to validate process reliability and content integrity.
- Analyzed structured data and reporting systems to detect inconsistencies and improve system performance.
- Supported setup and optimization of business and accounting systems for operational efficiency.
- Contributed to advisory work focused on improving system structure, automation readiness, and workflow efficiency for media and enterprise operations.

Work Experience 3:

Full Stack Developer – Saba Realtors (Real Estate Platform)

Project-Based | 2024 – Present

Designed and developed a scalable real estate web platform enabling property listing, search, filtering, and client-agent interaction with a focus on performance, usability, and clean architecture.

Frontend Development

- Built a responsive and dynamic user interface using modern frontend architecture for seamless property browsing across devices.
- Implemented advanced filtering systems (location, price, property type, availability) for improved user experience.
- Developed reusable UI components for listings, property cards, and dashboards to ensure consistency and scalability.

Backend Development

- Designed and implemented Restful API s to handle property listings, user authentication, and inquiry management.

- Built secure back-end logic for role-based access (agents, admins, and users).
- Structured back-end services to support scalable data operations and high traffic usage.

Database & Data Management

- Designed relational/non-relational database structure for property data, user profiles, and transactions.
- Optimized database queries for fast search and filtering of large property datasets.
- Ensured data integrity and consistency across all platform modules.

Authentication & Security

- Implemented secure authentication system with login, registration, and protected routes.
- Applied role-based access control for admins, agents, and clients.
- Ensured protection against common web vulnerabilities (e.g., unauthorized access, data leaks).

Deployment & Performance

- Deployed application on scalable cloud hosting with optimized performance configurations.
- Implemented basic caching strategies and optimized API response times.
- Ensured mobile-first responsiveness and cross-browser compatibility.

Full Stack Developer – ScholarisIQ (EdTech Learning Platform)

Project-Based | 2024 – Present

Built a scalable educational platform designed for learning management, course delivery, student tracking, and content organization.

Frontend Development

- Developed an interactive learning interface for students and instructors.
- Built dashboards for course access, progress tracking, and learning analytics.
- Created responsive UI components for video lessons, quizzes, and learning modules.

Backend Development

- Designed backend architecture for course management, user enrollment, and content delivery.
- Built APIs to manage students, instructors, courses, and assessments.
- Implemented structured logic for quiz evaluation and progress tracking.

Database Systems

- Designed database schema for users, courses, lessons, quizzes, and results.

- Optimized data flow for fast retrieval of learning content and progress data.
- Ensured scalable data structure for future platform expansion.

Features & System Logic

- Built automated learning progress tracking system.
- Implemented quiz and assessment engine with scoring logic.
- Developed content management system for instructors to upload and manage courses.

Security & Access Control

- Implemented authentication and role-based access (students, instructors, admins).
- Secured learning content access based on enrollment status.
- Protected user data and ensured safe session management.

Deployment & Scalability

- Deployed platform on cloud infrastructure with performance optimization.
- Structured backend for modular scaling and future feature expansion.
- Ensured responsive performance under multi-user access load.

OTHER PROFESSIONAL MEMBERSHIP, CERTIFICATION, AND AWARD.

2021: Back-end Development – Certification of Completion.

2020: Soft Skills in Career Building – Certificate of Completion.

2024: Front-end Development – Certificate of Completion.

2022: National Diploma in Marine Engineering.

2020: O' Level (WASSCE & NECO). Abayi Boys Secondary School, Abayi.

Personal Info/Educational Background:

Sex: Male

State/Country: Abia, Nigeria

State of Residence: Lagos, Nigeria.

Date of Birth: 14/1/2003
